

Patent # 6,729,511 and Patent Pending

Lifting/Moving System that Reduces Back, Hand, Arm and Forearm Strain.

The Shoulder Dolly can be used to move most bulky/heavy items, such as Appliances, Furniture, Cabinets, Mattresses, Plywood, Cased Glass, File Cabinets and much, much more . . .

The Shoulder Dolly® Light Duty™ lifting system was designed by a professional mover to make the task of lifting heavy/bulky objects much easier in a variety of situations. The system works using leverage. Rather than bending over to pick an object up, the Shoulder Dolly allows you to lift in an upright position. The larger shoulder and leg muscles lift the weight, significantly decreasing strain to the lower back, hands, biceps and forearms. The versatile, quick adjust tension buckles allow a nearly unlimited choice of adjustments for a wide variety of lifting situations. The system makes moving things easier and safer.

- **Reduces Risk of Injury**
- **Encourages Safe Lifting Technique**
- **Eliminates Floor Damage Caused by Hand Trucks**
- **Increases Efficiency**
- **Superior to Systems that Utilize Smaller Muscles to Bear the Weight**
- **Excellent for Going Up/Down Stairs**

Shoulder Dolly® Light Duty™ Specifications:

UPC Code: 895678000014

TDT Moving Systems Inc. Item # LD1000

Packaging Type: Clamshell

Packaging Dimensions: H 12" x W 9" x D 3"

Weight: 4 lbs.

Case: 12 Units, H 19" x W 18.5" x D 13"

Master Carton: none

Recommended Weight: Up to 400 lbs.

Tested Capacity: 1500 lbs.
