

Palm Light

Patent Pending

A Geolights Product

Traditional lights require one hand to be used to hold it in place. Flash lights for example, are a great source of light, however when you need light directly where you are doing your work, a flashlight just will not work. Flashlights can be blocked by shadows from surrounding objects or even your own hand.

This example is one of the many reasons we decided to develop a simple, convenient light source that fits directly in the palm of your hand, the Palm Light. Our Palm Light is 19 by 50 mm in size, uses four 1.5v batteries to power two high output LED's, and it straps directly to your hand with a black Velcro which is also cuttable for any sized hand.

The Palm Light is great for:

- Use as a safety light.
- Managing your way through a dark room.
- Working in closed dark spaces.
- Reading at night.
- When on a camping trip.
- Jogging, hiking or biking at night.
- Changing a tire in the dark.
- And much more...
