

DR. mistTM

Body Hygiene Floatation Fluid Spray

Product Profile
Pharmacist Copy

Award Compliment

The Invention of DR. mist obtained several awards including the Geneva International Invention and New Technique of Switzerland Award, The I-TEX 2000

Malaysia International and Design Award, the Global Excellent Product Golden Rim Award, the SMI Award for Outstanding Accomplishments and Contributions.

Floatation Technology

Break Through The Secret Of Physics

DR. mist is an award winning new invention based on floatation technology. DR. mist is **fragrance free, stain free, colorless, and non-oily** and **non-alcohol** based.

It helps to get rid of body, foot and underarm odor effectively and can also be used for mosquito and insect bites, open wounds, acne, eczema and other skin itchiness caused by toxins. The product has been proven harmless to skin and it is an augmented hygiene care floatation fluid spray. DR. mist kills surface bacteria which causes odors and allows the pores to breathe naturally.

DR. mist fluid spray does not contain any fragrance, artificial colorings, cream, oil or alcohol. It embraces an environmental-friendly and hygienic concept process.

DR.mist Body Hygiene Floatation Fluid Spray

Product Features

The Function of DR.mist Floatation Fluid Spray
Able to flush out darkening and pigmentation from the pores in the underarm region. This arises from germs and acidic sweat reaction, thereby effectively rejuvenating the skin to its natural state.

Rarely has a product provided so much
in one bottle. DR. mist has been used to effectively kill body odor for up to 3 days even when bathing was not possible, it has been used for acne, eczema, open wounds, and to take the sting right out of mosquito/insect bites to reduce swelling and accelerate healing.

A Unique Product

DR. mist fluid spray does not contain any fragrance, artificial colorings, cream, oil or alcohol. It embraces an environmental-friendly and hygienic concept process.

Feels like Water

Once DR. mist is applied on the under-arm area and dries, there is no stickiness or irritation, leaving only a naturally clean and fresh feeling, with absolutely no contamination on body and clothes.

Simplicity of Application

Towel-dry after bathing; Spray on the under-arm area, spread evenly with hands. Product may also be sprayed directly on open wounds, on clean feet and socks or applied with a pad to acne/pimples with visible results in 24 hours.

To Fulfill the Patient's Satisfaction on Hygiene Able to assist confined and disable patients unable to shower.

The Mission Of Invention

Body Hygiene Floatation Fluid Spray

Body Hygiene and Health Care Floatation Fluid Spray

1. A radical change towards body care, by eliminating the traditional misconception that human underarm's sweaty odour is immensely difficult to get rid of.
2. The first and only in the world that educates people to enhancing underarm hygiene care.
3. DR. mist Floatation fluid that produces a powerful disinfecting germicide yet is harmless to the cell of skin, which is indeed an innovative invention and a tremendous contribution to mankind at the medical & beauty fraternity.

Research Background

For centuries, mankind has neglected personal underarm hygiene care.

The million-dollar question is: "How can we accept the unpleasantness of body odour, and allow it to degrade the quality of our life?"

Foreword

As we enter the new millennium, mankind has a greater awareness of the need for greater personal care. Correspondingly, the amount of personal care products available in the market for application from our head to toes is literally countless, coming in all forms, shapes and sizes.

Unfortunately, one of the most glaringly deficient product is an effective underarm cleanliness and hygiene product.

Why are the underarm cleanliness and hygiene products not been used extensively as the common soap and toothpaste?

The main reason is that the defects of using conventional deodorants are:

- **Not effective in meeting our daily requirements.**
- **Inconvenient and impractical application methods.**
- **Product-caused underarm discomfort.**
- **Potentially harmful to body and stains clothing.**
- **Concept of deodorizing can inflict upon one's self-esteem.**

Consequent to the above reasons, conventional deodorants are not capable of becoming "essential" daily personal care product. This has also further contributed to our status quo, where even as mankind had made leaps and bounds in the technological and medical frontiers, we are still trapped in the mind set that having body odour is inevitably part of being humans.

With the invention of DR. mist floatation fluid, the erroneous mindset that has existed for thousands of years and is now due for a major overhaul!

Inspirations from Dead Sea

The "Dead Sea" contains a concentration of minerals 38 times higher than the normal ocean water. Today, many of those who suffer from skin disease will come to the "Dead Sea" for a treatment. Moreover, there are a number of organizations; especially from the medicine sector who do research here as well.

Comparison of key elements between Dead Sea, Mediterranean Sea and ocean water

WATER RESOURCES	Chlorine	Magnesium	Sodium	Calcium	Potassium	Bromide
Dead Sea	224,000	44,000	40,100	17,200	7,650	5,300
Mediterranean Sea	22,900	1,490	12,700	470	470	76
Ocean Water	19,000	1,350	10,500	400	390	65

Break Through The Secret Of Physics

Following the study of physics based on Dead Sea Minerals, DR. mist emerged as "**The First in The World**", Floatation Fluid Spray.

After drying, the functional component will form a powder, stored at the skin level and it won't disappear, The principle is that, DR. mist fluid spray contains a concentration of salt and mineral components 4% heavier than ordinary water.

World's Most Advance Spray

Sn Healing Skin Disease, Cuts, Wounds and Underarm Hygiene Care.

Apply DR. mist Floation Fluid's function to flush out Toxins and Germs from the pores, which is trapped in the epidermis layer of skin and cut wound.

A fast drying and powdery forming residue is left on the wound. This will protect the wound from further infections, and prevent it from becoming a breeding ground for germs.

Effectiveness

1. The above treatment activates the prevention of germ growth on wounds and no skin discoloration will accompany the accelerated healing process.
2. Able to heal skin diseases, swelling and itching caused by insect or mosquito bites, rashes, bacteria, athlete's foot, fungus and toxin infection etc.

(Note: Scratch the itchy area to open up pores and spray on DR. mist floatation fluid spray thereby allowing DR. mist Floation fluid to penetrate more efficiently and swiftly flush out the present germs and toxins from the pores in the epidermis layer of skin, thereby effectively killing germs and accelerating the reduction of swelling and itching.) Spray DR. mist floatation fluid directly onto the wound or infected area three to four times daily. With an accelerated healing process, wounds will not develop any puss or inflammation, thus reducing unnecessary suffering.

Laboratory Test Reports

Several independent labs tested DR. mist with impressive results including, SIRIM Testing, Chemlab, SGS Testing, Analabs.

- Sirim Test Report
- Islamic Religious Council Certificate
- CHEMLAB Chemical Laboratory
- ANALABS Analytical Laboratories
- SGS Testing & Control Services
- SGS Oil, Gas & Chemicals
- ISO Certificate 9001-2000 certificate
- GMP (Good Manufacturing Practice)

Laboratory Test Reports

TEST REPORTS revealed for Dr. mist
Multi-Action Hygienic Body Spray

- Total colony count, viable organisms Nil per ml
- Radioactive Contamination of Cs 134 / 137 – Not detected
- Arsenic (As) < 0.1
- C8an1um (Cd) < 0.05
- Copper (Cu) < 0.02
- Lead (Pb) < 0.2
- Mercury (Hg) < 0.001
- Antimony (Sb) < 1.0
- Tin (So) < 3.0
- Zinc (Zn) < 0.05
- Total Bacteria Count < 10
- Total Coliform Count < 10
- Total E. co Ii Count < 10

On Microbiological analysis in accordance with USP 25 : United States Pharmacopeia 2002-Antimicrobial Effectiveness Testing the following results were obtained:

Organism	Result % killed
Escherichia coli	99.0
Pseudomonas aeruginosa	99.0
Staphylococcus aereus	99.0
